

Great care is taken to load your shipment of cabins. Each cabin is wrapped in UV protective plastic 6 sides to ensure a water tight wrapping. The cabins are then palletized with skid rails attached to each side. Side loaders are used so the containers can be lowered to the ground for quick and safe loading, without the need for a loading dock. They are positioned and pushed into the container using a custom front blade on fork lifts.

### Loading

## **Unloading**

Effective April 1, 2012 all pallets will include straps used to pull the lifts from the container. The two methods for unloading that have proven to be most effective are loading docks or a flat deck tow truck. By hooking on to the straps, the lifts can be removed from the containers by simply pulling them out and then lifting from the side using a fork lift.
